## **Autonics**

# POWER CONTROLLER SPC SERIES

M

Thank you very much for selecting Autonics products. For your safety, please read the following before using.

## Caution for your safety

XPlease keep these instructions and review them before using this unit.

\* Please observe the cautions that follow:

Product may be damaged, or injury may result if instructions are not **⚠** Caution

followed.  $\frak{X}$  The following is an explanation of the symbols used in the operation manual.

▲caution:Injury or danger may occur under special conditions.

## **Marning Marning**

- 1. In case of using this unit with machinery(Ex: nuclear power control, medical equpment ship, vehicle, train, airplane, combustion apparatus, safety device, crime/disaster prevention equipment, etc) which may cause damages to human life or property, it is required to install fail-safe device.
- It may result in fatal damage, fire or human injury.

  2. This unit must be installed on panel and F.G. terminal must be a good earth ground. It may give an electric shock
- Do not connect terminals when it is power on.
  It may give an electric shock.
- 4. Do not disassemble and modify this unit, when it requires.
- If needs, please contact us.
  It may give an electric shock and cause a fire
- 5. Do not touch terminals after power off.
- It may give an electric shock.

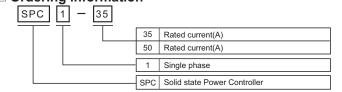

## 

- 1. This unit shall not be used outdoors.
- It might shorten the life cycle of the product or give an electric shock.

  2. Please see the wire spec. chart for power and load connection by load current.
- It may give an electric shock. 3. Please tighten bolt on terminal block with specified tightening torque.
- Specified tightening torque -M3.5 : 0.6 to 1.2N·m(6.0 to 12.0kgf·cm)
  -M5 : 1.5 to 2.2N·m(15 to 25kgf·cm) It may cause a fire due to contact error.
- Please observe the rated specification.
  It might shorten the life cycle of the product and cause a fire
- 5. In cleaning the unit, do not use water or an oil-based detergent.
  It might cause an electric shock or fire that will result in damage to the product.
  6. Do not use this unit at place where there are flammable or explosive gas,
- humidity, direct ray of the sun, radiant heat, vibration, impact etc. It may cause explosion or a fire
- Do not inflow dust or wire dregs into the unit. It may cause a fire or mechanical trouble.
- 8. Do not touch the heat sink while it is running
- It may cause a burn.

  9.This unit requires 1 to 3 sec ready time to operate after supplying power. At this ready time, output does not occur.

# Ordering information

SPC1-50

## Model 220VAC 50/60Hz Allowable operating 90 to 110% of rated voltage

Specifications

voltage		90 to 110% of rated voltage		
Operating frequence fluctuation		± 1Hz		
Maximum rated current		35A(Single phase)	50A(Single phase)	
Control power		220VAC		
Control range		Phase control: 0 to 98%, Cycle control: 0 to 100%		
Applied load		Resistance load(Min. load:over 5% of rated current)		
Cooling method		Natural air cooling		
Control circuit		Micom control type		
Control input		1-5VDC		
		DC4-20mA(250Ω)		
		ON/OFF(External relay contact or 24VDC)		
		External VR(1kΩ)		
		Output limit input(Front OUT ADJ. VR)		
	By selection S/W	Phase control <sup>∗1</sup>		
Control type		Cycle control(ZERO CROSS)-period 0.5, 2.0, 10sec*1		
ll type		ON/OFF control(ZERO CROSS)		
Starting type		SOFT START(0 to 50 sec variable)		
Display		Output indication(LED)		
Insulation resistance		100MΩ (at 500VDC megger)		
Dielectric strength		2000VAC for 1minute		
Noise		± 2kV the square wave noise(pulse width:1μs) by the noise simulator		
Vibration	Mechanical	0.75mm amplitude at frequency of 10 to 55Hz in each of X, Y, Z directions for 1hour		
	Malfunction	0.5mm amplitude at frequency of 10 to 55Hz in each of X, Y, Z directions for 10min.		
Shock	Mechanical	300m/s <sup>2</sup> (30G) in X, Y, Z directions for 3 times		
Onlock	Malfunction	100m/s <sup>2</sup> (10G) in X, Y, Z directions for 3 times		
Environ- ment	Ambient temperature	0 to 50°C, Storage : -25 to 65°C		
	Ambient humidity	35 to 85%RH		

Unit Weight Approx. 1kg \*\*Environment resistance is rated at no freezing or condensation.

\*\*X1. Refer to **Operation and function** 1. Control mode selection

## Factory default

 actory acrassic	, ,		
Control mode	Phase control mode		
Control type	Phase equality division type according as control input		
Cycle control period	0.5sec(JP1, JP2 short)		
SOFT START setting	0sec		
OUT ADJ. setting	100%		

# Parts name

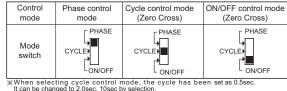

- ① Case
- ② Terminal block cover
- ③ Terminal block for control input 4 Terminal block of the power
- (5) Terminal block for load connection
- © LED display for output Selection S/W of control mode
- ® SOFT START adjusting volume
- OUT ADJ. volume Selection jumper of control period
- Selection jumper of control type
- ① The hole for fixing on panel (Bolt size:M4 × 50)
- ※⑩,⑪ are placed on the inner PCB of the product.

## The above specifications are subject to change without notice.

ଘ ଣ

## Operation and function

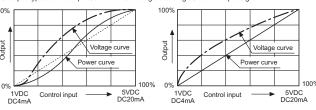

- When selecting cycle control mode, the cycle has been set as 0.5sec. It can be changed to 2.0sec, 10sec by selection.

  Yhe mode cannot be changed during it is operating.
  Be sure to set the proper mode after turnning the power off then supply the power again.

It is output type to control phase of an alternating according as control input signal

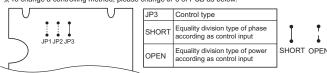

(Picture 1)Equality division type of phase according as control input

This is analog type to output control angle with dividing equally according as control input signal. It shows power characteristic as (Picture 1) and it might be occurred over power and lack power at point middle of control input.

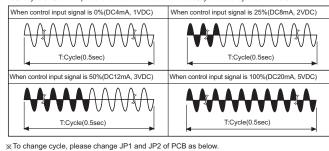

(Picture 2)Equality division type of power according as control input It divides control angle non-equally according as control input signal then make power curve linerize, so it becomes possible to

※ To change a controlling method, please change JP3 of PCB as below

## 2)Cycle control-Zero Cross

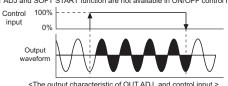

It controls the supplied power by ON/OFF cycle repetitively according to controlling input signal during set cycle(Selectable 0.5, 2, 10sec) as below. It is easy to control the load and there is no ON/OFF noise because it turns ON and OFF at the zero point of AC. Usually it is used in a place or electric furnace with not easily effected by external noise

## 3)ON/OFF control-Zero Cross

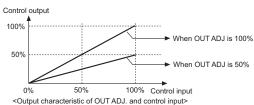

This function is when control input is ON, output is 100%. When it is OFF, output is 0%. It is the same function as SSR(Solid State Relay). (On and Off is operated on the ZERO point of AC.) OUT ADJ and SOFT START function are not available in ON/OFF control mode

<The output characteristic of OUT ADJ. and control input >

## 2. OUT ADJ. function(0 to 100%)

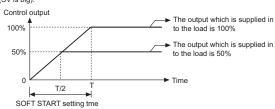

This function will be[Control input(%) X OUT ADJ.(%) = Output] and it controls the power supplied into the load. Although control input is 100% (5V or 20mA), the output is the 50% which is proportioned with OUT ADJ. When not using OUT ADJ. function, please make set value 100%.

ust not be used in ON/OFF control mode.

## 3. SOFT START function(0 to 50sec)

When the power is supplied, this function is able to protect the load when it controls load (Molybdnum, White gold, infrared Lamp) with inrush current or the width of rising temperature in big(SV is big).

SOFT START set time (T) is the required time that output reaches to 100%, and it is differentiated by OUT ADJ. set value. For example, SOFT START is set as 10sec and OUT ADJ. is set as 70%,

by OUT ADJ. set value. For example, SOFT START is set as Tosec and OUT ADJ. is set as 70%, it takes 7sec. to reach goal output.

[Set time (T) × OUT ADJ. set value (%)=10sec × 0.7 = 7sec]

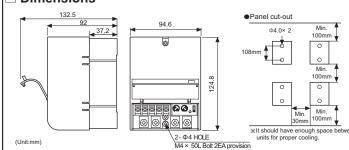

If increasing the OUT ADJ. before output reaches to goal output, it delays as much as the value, multiplyiof increased value (%) and SOFT START set time.

When not using SOFT START function, please make set value 0.

\*This function must not be used in ON/OFF control mode

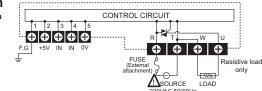

4. OUT display function
 This is LED lamp to display the status of output and will be getting brighter according as output.
 (0%:Min. LED light, 100%:Max. LED light)

# Dimensions

# Connection

## 2. Connection of control input terminals

IN GND

## 2)1-5VDC control input

+5V

### 3)External contact control input

It controls 100% to connect external S/W or relay contact to ②, ③ terminal when it is ON, it controls 0% when it is OFF.

## 4)External volume control input

It controls 0 to 100% with turning VR to connect  $1k\Omega$  to  $\odot$ ,  $\odot$ ,  $\odot$  terminals when power is supplied, or after connect  $\odot$  terminal to  $\odot$  terminal, it is possible to control 0 to 100% with turning OUT ADJ. <Se EX2) of  $\blacksquare$ Application>
OUT ADJ will be operated in state of above 1), 2), 3). Set at 100% when it is not used.

## 5)External 24VDC control input

It is possible to connect as below with 24VDC in ON/OFF control mode

XIt is available for all control modes. **OUT ADJ and SOFT START function** are not available in ON/OFF control mode.

When supplying 24VDC, the output will be 100%. When 24VDC is not supplied, the output will be 0%. Therefore ON/OFF control is available.

## Application

and terminal 3.

Ex1)When it needs to control accurately with adjusting the power in phase control and cycle control mode. For example, if it needs to control 80% output when it is ON, 24% output when it is OFF, please keep below.

Firstly set OUT ADJ. as 80% and connect external volume and external relay contact S/W as above picture then set external volume as 30%.

•When the External contact signal is ON : 100%(contact input) × 80%(OUT ADJ.) = 80% ●When the External contact signal is OFF: 30% (volume input) × 80%(OUT ADJ.) = 24%

Ex2)This is how to control 0 to 100% without external volume in phase control mode and cycle control mode.

It is possible to control 0 to 100% with turning OUT ADJ. in state of connecting terminal 2

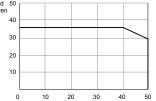

## Control input specification and function for each mode

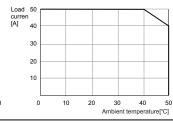

• Please see < Connection of control input terminals > and above function.

Mode Input and function	Phase control mode	Cycle control mode	ON/OFF control mode					
	DC4-20mA		External relay contact or 24VDC					
Control input	1-5VDC							
specification	External relay contact, 24VDC							
	External volume							
	OUT ADJ.		OUT display					
Function	SOFT START							
	OUT display		]					

## Temperature characteristic curve

## Caution for using

1. Installation environment ①It shall be used indoor ②Altitude Max. 2000m

③Pollution Degree 2
④Installat
2. Do not use this unit at below places. (4) Installation CatergoryII

①Place where there are severe vibration or impact.

@Place where there are direct ray of the sun ③Place where strong magnetic field or electric noise are generated.

When test dielectric voltage and ins this unit installed. ①Isolate this unit from the circuit of control panel. ②Make all terminals of this unit short-circuited.

4. When you installing it on panel, it should be installed vertically at the place which is well ventilation. If install it horizontally, under 70% of rated current should be supplied.

5. The fuse for inner circuit must be installed between the terminal of R and the power.

| AWG No. | Area(mm) | Applicable | AWG No. | Area(mm) | AWG No. | Area(mm) | AWG No. | Area(mm) | AWG No. | AWG NO.

6. The inductive load cannot be used because this is

for resistive load only. 7. Be sure to set the proper mode after cut

the power off then supply the power again 8. Case detachment

Please turn off the power before detaching the case. ①Widen lock device toward the outside with a driver

%Be careful to use machine tools, it may cause

@Pull up the

an injury. XIt may cause malfunction if above instructions are not followed.
